Daliresp Tablet

What is roflumilast?

Roflumilast reduces inflammation in the lungs that leads to COPD (chronic obstructive pulmonary disease).

Roflumilast is used to prevent worsening of symptoms in people with severe COPD.

Roflumilast is not a bronchodilator and will not treat a bronchospasm attack that has already begun.

Roflumilast may also be used for purposes not listed in this medication guide.

Important Information

You should not use roflumilast if you have moderate or severe liver disease.

Some people have thoughts about suicide while taking roflumilast. Stay alert to changes in your mood or symptoms. Report any new or worsening symptoms to your doctor.

Sometimes it is not safe to use certain medications at the same time. Tell your doctor about all your current medicines and any you start or stop using.

Call your doctor at once if you have rapid and unintended weight loss.
