Airplane mode offers several benefits depending on what you want to do. ThisTurn off all Bluetooth, Wi-Fi, cellular, and data connections on your Android phone. This is called airplane mode because airlines require these connections to be disabled during takeoff and landing. However, there are other benefits. Check them out here. This saves battery life. By switching to Airplane mode, you can save phone battery. Of course, there isn't much you can do with your phone in flight mode, e.g. B. make calls or use the Internet, but you can switch between the two modes regularly if necessary. This can reset the connection. Sometimes the connection drops for no reason. Turning Airplane mode on and off often solves the problem. You get peace and quiet. Feeling overwhelmed with notifications but don't want to turn off your phone? Airplane mode works like Do Not Disturb, giving you peace of mind. Airplane mode on an Android phone looks almost the same as when connected to the outside world. The only difference is that your phone shows Airplane mode and an airplane photo at the top of the screen. Besides, it's the same and your experience won't be any different. It's even possible to turn Wi-Fi back on when Airplane mode is on, so you don't get messages or cell calls. It can be helpful to put your phone in flight mode. This is mainly because turning off the data connection saves your battery and turns off the antenna so it's not looking for a signal. Sometimes it also helps to disconnect from the world for a while, using the option to turn Wi-Fi back on but no mobile data. When traveling abroad, it's often a good idea to turn on airplane mode to avoid accidentally paying international fares. Remember to turn on Wi-Fi if you turn off mobile data in airplane mode. Get the latest tech news every day Subscribe Tell me why! To enable Airplane Mode on Android I am using this code: Settings.System.putInt (context.getContentResolver (), Settings.System.AIRPLANE_MODE_ON, 1); new intention = new intention (intent.ACTION_AIRPLANE_MODE_CHANGED); newIntent.putExtra ("Status", true);

context.sendBroadcast (new intent); Works with API 16 but does not work with API 23 and the application crashes. What should I do? And the second question: How to turn on and off mobile data in Android without rooting? I am trying to programmatically enable / disable airplane mode on android, have rooted my device, even set the app as a system app but still can't get it running, below is my code // about to broadcast a notification intent = new intent (Intent.ACTION_AIRPLANE_MODE_CHANGED); intent.putExtra ("status":! state); send broadcast (intention); } function call from toggleAirplaneMode (0, true); call the function with toggleAirplaneMode (1, false); this is a permission denied exception: android.permission.write_secure_settings is required to save secure settings The device has already been rooted and I have set the application as a system application in my permission manifest android: name = "android.permission.WRITE_SETTINGS" /> Please help me to solve this problem. You can't, as written in the official API documentation for Android 4.2. Some device settings defined in the settings system are now read-only. If your app attempts to save setting changes defined in Settings.System that have been migrated to Settings.Global, the save fails silently on Android 4.2 or later. Even if android.targetSdkVersion and android.minSdkVersion are less than 17, your application will not be able to change the settings that have been moved to Settings.Global when running on Android 4.2 or later. However, if you are an OS developer, you can write them by setting these permissions Then write and read, // write settings.Global.putString(getContentResolver(), "airplane_mode_on", "1"); // read string result = Settings.Global.getString(getContentResolver(), Settings.Global.AIRPLANE_MODE_ON); Toast.makeText(it, "result:" + result, Toast.LENGTH_SHORT).show(); Airplane mode is a handy setting that lets you turn off all wireless connections on your phone with a single tap. It certainly comes in handy when you're flying or dealing with minor network problems. But what if your Samsung Galaxy phone is stuck in airplane mode forever? Don't worry, it's nothing you can't fix yourself with the troubleshooting tips below. 1. Perform a hard reset If your Samsung phone is stuck in airplane mode and not responding, you can start with a hard reset. Don't worry, your personal information will not be affected. To hard reboot your Samsung phone, press and hold the power button and the volume down button at the same time for more than 7 seconds. Wait for the phone to turn off completely. Now turn it back on by holding the power button and see if it works.can disable airplane mode. 2. Don't allow apps to change system settings. Such problems can also occur when you allow third-party apps to change the system settings on your phone. In this case, the app with errors can re-enable Airplane mode without prompting. Here's how you can fix it. 1. Launch the Settings app on your phone and open the Apps section. 2. Tap the three-dot menu icon in the top-right corner and choose Special Access. 3. Tap Change system settings to see a list of apps that can change system settings on your phone. Check this list and use the toggles to prevent third-party programs from changing your system settings. Then restart your phone and see if you can disable airplane mode. 3. Reset Network Settings Misconfigured network settings can also cause the following issues on your Samsung phone. Instead of going through all your network settings one by one, you can reset them to default by following the steps below. 1. Launch the Settings app and go to the General Management section. 2. Scroll down to tap Reset and on the next screen select Reset network settings. 3. Press the Reset Settings button and follow the on-screen instructions to complete the network settings reset. 4. Try Safe Mode Safe Mode is a useful tool that can help you solve most Android phone issues. Booting your Samsung phone into safe boot mode disables all third-party apps and non-essential services. So if any of them are causing the problem, you can try disabling Airplane mode in Safe Mode. 1. Press and hold the power button until the power menu appears. 2. Press and hold the shutdown icon, then tap the green checkmark to boot into safe mode. Now try turning off Airplane mode. After turning off, the phone should connect to the carrier. Use your phone in safe mode for a few minutes and then restart it to exit safe mode. 5. Wipe cache partition Like phone apps, Android creates and stores temporary files to perform specific tasks.are mostly stored in the system cache partition. However, if this data has been corrupted, the phone may not function properly. In this case, you can wipe the system cache partition to see if that helps. To wipe the cache partition on a Samsung Galaxy phone, you first need to put the device into recovery mode. 1. Press and hold the power button until the power menu appears. 2. Tap Power off to turn off your phone. 3. Now connect your phone to your computer with a USB cable. 4. Once connected, press and hold the Power button and Volume Up button at the same time until the Samsung logo appears. Your phone will boot into recovery mode. Note. While in recovery mode, your phone's touch screen will stop working. Thus, you must use the volume keys and the power button to navigate through the menu. 5. Use the volume down button to navigate to Wipe cache partition. Then press the power button to select it. 6. Then use the volume down button to select "Yes" and press the power button to confirm. Wait a few seconds for the system to clear the cache. 7. After cleaning, highlight "Reboot system now" and press the power button to confirm. After rebooting your phone, check if it is stuck in Airplane Mode. So, if none of the above solutions work, you can check for any pending software updates by going to the Software Update section in the Settings app. Reconnecting When your Samsung Galaxy phone gets stuck in Airplane Mode, it can be easy to get frustrated. Following the tips above should fix the problem for good. However, if this is not the case, the issue may be hardware related and you may need to visit your nearest service center to have it fixed.
