

I'm human

The Nissan Tiida (C11) Owner's Manual is a comprehensive guide for Japanese Import model owners from 2004 to 2012. This 232-page manual has been translated from the original Japanese handbook into English and features full illustrations, making it an excellent resource to complement your vehicle. The manual covers various topics, including instruments and controls, pre-driving checks and adjustments, heater, air conditioner, and audio system operation, as well as starting and driving instructions. It also includes sections on emergency procedures, appearance and interior care, and DIY operations. Additionally, the manual provides a maintenance schedule and technical information for each engine model (HR15DE and MR18DE). Please note that this is not a workshop manual, which would include repair and service information. Instead, it's designed to familiarize owners with the vehicle's features and provide basic tips on driving, maintenance, and troubleshooting. This owner's handbook can be purchased as a new item, and its ISBN is 978-1-86976-276-6. It was published in January 2018 and printed in Australia under license from Nissan.
