Dog dna test price

Curious about your pup's DNA? Check out Costco's dog DNA test and discover if it's worth the price for insights into your dog's ancestry! If you're a pet owner curious about your dog's ancestry, health risks, or unique traits, you've likely stumbled across the growing world of dog DNA tests. Among the many options available, Costco's Dog DNA Test—revealed to be the Embark Dog DNA Test—has caught the attention of savvy shoppers and pet enthusiasts alike. Priced at around \$99, it promises a wealth of information about your furry friend. But is it worth the investment? In this in-depth blog post, we'll explore the features, pricing, accuracy, and value of Costco's Dog DNA Test, compare it to competitors, and help you decide if it's the right choice for you and your pup. Before diving into the nitty-gritty, let's clarify what you're getting when you purchase Costco's Dog DNA Test. Through research, including information from Embark's official website and retail comparisons, it's evident that Costco offers the Embark Dog DNA Test. This isn't a generic or store-brand product—it's a well-respected test developed by Embark Veterinary, Inc., in partnership with the Cornell University College of Veterinary Medicine. This collaboration lends credibility to the test, positioning it as a reliable option in the pet genetics market. The Embark test is designed to uncover your dog's breed makeup, screen for genetic health conditions, and provide insights into traits and ancestry. Whether you have a mixed-breed rescue or a purebred companion, this test aims to deliver actionable information to enhance your understanding of your dog's needs and care. Embark Dog DNA Breed Identification Kit - 99% Accurate Ancestry Test with Relative Finder

Uncover your dog's heritage with the Embark Dog DNA Breed Identification Kit, offering unmatched accuracy by screening over 350 breeds. Developed in collaboration with Cornell University College of Veterinary Medicine, this research-grade test delivers a precise breed breakdown, helping you understand your dog's ancestry with confidence. Beyond breeds, Embark's innovative canine relative finder connects your pup to close relatives, with over 90% of tested dogs finding a cousin and 12% discovering direct family members, creating a unique family tree experience. Embark prioritizes exceptional service, providing results in 2-4 weeks with regular updates and access to dedicated vets or geneticists for any questions. Each purchase supports ongoing research into canine genetic diseases and contributes to Embark's Old Dogs, New Homes initiative, aiding older shelter dogs in finding loving homes. For optimal results, use the kit by the swab's printed date, though Embark's support team offers a replacement swab if issues arise, ensuring a smooth process. Pros: Highly accurate breed identification with 350+ breed screening. Unique relative finder connects your dog to family members. Fast results (2-4 weeks) with excellent customer support. Supports canine health research and shelter dog adoptions. Research-grade technology ensures reliable outcomes. Cons: Swab has a best-by date for optimal DNA extraction. Higher price point compared to some competitors. One of the first questions pet owners ask is, "How much is this going to set me back?" According to current listings, the Embark Dog DNA Test is priced at approximately \$99 at Costco, aligning with Embark's introductory offer (down from a regular price of \$129). This price point is notably competitive, especially when you consider the broader market for dog DNA tests, where costs typically range from \$70 to \$200. To put this in perspective: Wisdom Panel Essential, a popular alternative, retails for \$104.99. Wisdom Panel Premium can cost significantly more, often exceeding \$150. DNA My Dog tests range from \$70 to \$100, but they offer fewer features. Ancestry Dog DNA Test hovers around \$99 but lacks the depth of Embark's offerings. Costco's reputation for value-driven pricing suggests that the \$99 price tag is a steal, especially given the comprehensive nature of the Embark test. But price alone doesn't tell the whole story—let's explore what you're actually getting for your money. Embark Dog DNA Test - Breed, Health, Traits & Allergy Insights with Relative Finder

The Embark Dog DNA Test provides a comprehensive look into your dog's genetic profile, screening for over 270 health conditions and 350 breeds, including rare ones like dingoes and wolves. Developed with Cornell University College of Veterinary Medicine, it delivers highly accurate breed identification and actionable health insights, empowering 37% of owners to adjust their pet care plans. Additionally, it evaluates 55 physical traits—such as size and shedding—while offering exclusive allergy risk scores for environmental, food, contact, and flea sensitivities, complete with vet-approved tips for management. With Embark's patented canine relative finder, you can connect your dog to their family, facilitating nearly a million heartfelt messages and reunions. Results arrive in 2-4 weeks, supported by exceptional service from dedicated geneticists and veterinarians who guide you through the process. Whether you're curious about your dog's ancestry, traits, or health risks, this test equips you with personalized knowledge to enhance their well-being and strengthen your bond. Pros: Tests 270+ health conditions for proactive care. Accurate breed identification across 350+ breeds. Unique allergy risk scores with actionable advice. Relative finder fosters meaningful dog connections. Fast results with expert support in 2-4 weeks. Cons: Premium price compared to basic DNA tests. Requires careful swab handling for best results. The Embark Dog DNA Test is packed with features that make it a standout choice for pet owners. Here's a detailed breakdown of what you can expect: Ever wondered what breeds make up your dog's unique mix? Embark identifies over 350 breeds, including rare ones, providing a precise breakdown of your dog's ancestry. This is particularly valuable for owners of mixed-breed or rescue dogs, where lineage is often a mystery. The test also offers geographic ancestry insights, giving you a glimpse into your dog's heritage. One of Embark's biggest selling points is its health screening, which tests for over 270 genetic health conditions. From conditions like hip dysplasia to heart disease, this feature empowers you to take proactive steps in managing your dog's health. For comparison, many competitors screen for far fewer conditions (e.g., Wisdom Panel Essential covers only 30). Ever thought your dog might have long-lost cousins out there? Embark's relative finder connects you with other dogs sharing your pup's DNA. According to Embark, 90% of tested dogs find at least one relative, adding a fun and interactive element to the experience. Embark analyzes 55 physical traits, such as coat type, size, grooming needs, and even behavioral tendencies. A newer feature includes allergy risk scores for four categories—environmental, food, contact, and flea—helping you anticipate and manage potential sensitivities. The test measures your dog's coefficient of inbreeding (COI), offering insights into genetic diversity. This can be particularly useful for understanding potential health risks associated with inbreeding, especially in purebred dogs. For mixed-breed dogs, Embark provides a family tree, tracing their lineage. Note that purebred dogs may not receive a family tree due to shared ancestry, but the geographic ancestry feature still adds depth to the results. The testing process is straightforward: collect a cheek swab, activate the kit online, and mail it back in a prepaid envelope. Results are typically available within 2-4 weeks, delivered through an easy-to-navigate online portal. These features combine to create a comprehensive picture of your dog's genetics, making the Embark test a powerful tool for pet owners who want to go beyond curiosity and into actionable care. Wisdom Panel Breed Discovery Dog DNA Test - 365+ Breeds, MDR1 Health, Ancestry & Relatives

The Wisdom Panel Breed Discovery Dog DNA Test offers precise identification of over 365 breeds, providing a detailed breed report down to 1% for a clear picture of your dog's heritage. With a database of 4 million tested dogs, it traces your pet's family tree back three generations and reveals behavioral tendencies to better understand their unique traits. The test also includes an MDR1 screening to detect potential sensitivities to certain medications, empowering you to make informed health decisions with your veterinarian. Connect with your dog's relatives through Wisdom Panel's expansive network, where 99.9% of dogs find a match, enabling photo sharing and DNA comparisons with other pet owners. Trusted by over 4 million users in 50+ countries, this test delivers fast, reliable results via a simple swab process. Whether you're exploring ancestry or ensuring your dog's well-being, Wisdom Panel provides actionable insights to enhance their care and deepen your bond. Pros: Highly accurate breed detection for 365+ breeds. MDR1 test identifies medication sensitivities. Connects your dog to relatives with a vast database. Provides ancestry and behavioral insights. Quick, painless process with trusted global reputation. Cons: Limited health testing compared to premium kits. Results may take longer during peak demand. To determine whether Costco's Dog DNA Test is worth the price, it's essential to stack it up against other options in the market. Here's how Embark compares to three popular alternatives: Features: Identifies 365+ breeds, screens for 30 genetic health conditions, analyzes 50+ traits, includes a relative finder, and provides ancestry insights. Limitations: The health screening is significantly less robust than Embark's, covering only 30 conditions compared to Embark's 270+. At a higher price point, it offers less value for health-conscious owners. Verdict: Embark outperforms Wisdom Panel Essential in health screening and additional features, making it a better choice for the price. Features: Covers 350+ breeds but offers limited health screening and minimal trait analysis. It lacks a relative finder and other advanced features. Limitations: While cheaper, DNA My Dog sacrifices depth and comprehensiveness, making it less appealing for owners seeking detailed insights. Verdict: Embark's broader feature set justifies the slightly higher cost for those prioritizing health and ancestry details. Features: Focuses on breed identification with limited health and trait information. It doesn't include a relative finder or advanced features like genetic diversity analysis. Limitations: Similar in price to Embark but far less comprehensive, it's better suited for basic curiosity rather than in-depth analysis. Verdict: Embark offers significantly more value for the same price, especially for health-focused pet owners. Embark's extensive health screening, allergy risk scores, and genetic diversity insights give it a clear edge over competitors, particularly in the \$99 price point offered at Costco. Tractive GPS Dog Tracker - Real-Time Location, Health Alerts & Virtual Fence. White Keep your dog safe and connected with the Tractive GPS Dog Tracker, delivering real-time location updates every 2-3 seconds across unlimited ranges via LTE coverage. Set virtual fences to receive instant alerts if your dog wanders beyond safe zones, and use location history to track their adventures. The Tractive app, compatible with iOS and Android, also monitors your dog's activity, sleep, and health patterns, helping you maintain their well-being with personalized insights. Designed for durability, this lightweight, waterproof tracker attaches easily to any dog collar and withstands outdoor escapades. Its battery lasts up to 10 days, with Power Saving Zones extending usage further. A subscription, starting at \$5/month, powers the integrated SIM card, and a 30-day money-back guarantee ensures confidence in your purchase. With responsive support and robust features, Tractive offers peace of mind for every pet owner. Pros: Fast real-time tracking with updates every 2-3 seconds. Virtual fence alerts enhance safety and recovery. Health and activity monitoring via intuitive app. Waterproof, lightweight design with 10-day battery. 30-day money-back guarantee for risk-free trial. Cons: Requires ongoing subscription starting at \$5/month. Relies on LTE coverage for optimal performance. Accuracy is a critical factor when choosing a dog DNA test, and Embark shines in this area. The test uses over 200,000 genetic markers—more than most competitors, including Wisdom Panel—ensuring precise results. Reviews from reputable sources, like Wirecutter, consistently rank Embark as one of the most accurate dog DNA tests available (The 2 Best Dog DNA Tests of 2025 | Reviews by Wirecutter). This accuracy translates into reliable breed identification and health screening, giving you confidence in the results. Whether you're confirming your dog's heritage or identifying potential health risks, Embark's rigorous methodology, backed by its Cornell partnership, sets it apart. Koko Genetics Dog DNA Test - 400+ Breeds, 25+ Traits, Ancestry & Lifetime Updates

Explore your dog's unique heritage with the Koko Genetics Starter DNA Test, analyzing over 710,000 DNA markers to identify 400+ breeds and deliver 25+ detailed reports on physical traits and ancestry. This comprehensive test maps your dog's family tree, uncovers their breed composition, and screens for carrier status among 150+ genetic conditions. Additionally, it connects you with your pet's relatives worldwide, offering a deeper understanding of their lineage and history. Designed for convenience, the test uses a simple at-home saliva sample, with results delivered in 4-6 weeks. Lifetime updates ensure you benefit from ongoing scientific advancements at no extra cost, while GDPR-compliant encryption keeps your dog's data secure. Backed by a team of genetics experts, Koko provides personalized support to help you interpret results, making it easy to apply insights to your dog's care and strengthen your bond. Pros: Analyzes 400+ breeds with 710,000+ DNA markers. Includes 25+ trait reports and genetic condition screening. Lifetime updates at no additional cost. Easy at-home test with expert support. Secure data protection with GDPR compliance. Cons: Results take 4-6 weeks, longer than some competitors. Requires unique email for each test registration. Beyond the specs, what do actual users think of the Embark test? Customer feedback highlights its practical benefits: Tailored Care: One owner used breed insights to adjust training for their dog's working breed traits, leading to better behavior and engagement (Embark Dog DNA Test Review - Here's How It Works and What You'll Learn). Health Insights: Another user identified hereditary conditions early, enabling vet-prescribed treatments that improved their dog's quality of life. Fun Discoveries: Many appreciate the relative finder, with stories of connecting with other owners and learning about their dog's extended "family." These testimonials underscore the test's value, particularly for mixed-breed or rescue dogs where health and behavior clues are often scarce. By providing actionable insights, Embark helps owners make informed decisions about diet, exercise, grooming, and veterinary care. DNA My Dog Essential Breed ID Test - 350+ Breeds, Fast Results & Detailed Insights

Unveil your dog's unique heritage with the DNA My Dog Essential Breed ID Test, which uses advanced CNV technology to analyze over 350 breeds with over 99% accuracy. This easy-to-use kit requires a quick, non-invasive cheek swab, making it stress-free for dogs of all ages. Within 2-3 weeks, you'll receive a comprehensive online report, including a downloadable DNA certificate, detailing your dog's breed composition, personality traits, and tailored care tips to enhance their well-being. Beyond breed identification, this test offers valuable insights into breed-specific health risks and behavioral tendencies, empowering you to strengthen your bond through expert training and care advice. Trusted by pet owners and rescue organizations since 2008, DNA My Dog ensures a seamless experience with excellent customer support and a prepaid envelope for hassle-free sample submission. Discover your dog's story and optimize their care with this reliable, insightful test. Pros: Over 99% accurate breed analysis for 350+ breeds. Fast results in 2-3 weeks with online access. Non-invasive swab, safe for all dogs. Includes health, behavior, and bonding insights. Trusted brand with strong customer support. Cons: Does not include genetic disease screening. Limited to breed and trait analysis only. So, is Costco's Dog DNA Test worth \$99? Let's weigh the pros and cons: Comprehensive Features: Breed identification, extensive health screening, trait analysis, and unique add-ons like allergy risk scores and genetic diversity. Competitive Pricing: At \$99, it's a steal compared to pricier options like Wisdom Panel Premium or even Wisdom Panel Essential (\$104.99). High Accuracy: Backed by 200,000+ genetic markers and a Cornell partnership, Embark delivers reliable results. Practical Benefits: Helps tailor care, identify health risks early, and uncover fun ancestry details. User-Friendly: Simple process with results delivered in 2-4 weeks. Not the Cheapest: Tests like DNA My Dog can cost less (\$70-\$100), but they lack Embark's depth. Purebred Limitations: Family tree features may not apply to purebred dogs due to shared ancestry. Wait Time: 2-4 weeks for results may feel long for impatient owners. Given its robust feature set, competitive pricing, and superior accuracy, the Embark Dog DNA Test at Costco is absolutely worth the \$99 price tag. It's an excellent investment for pet owners who want detailed insights into their dog's breed, health, and traits—especially for mixed-breed or rescue dogs. Compared to alternatives, Embark offers unmatched value, making it a top choice for proactive pet care. Ancestry Dog DNA Test Kit - Breed ID, Trait Insights & Community Connection

The Ancestry Dog DNA Test Kit offers a simple way to explore your dog's genetic background, analyzing their DNA against a database of 400 breeds to reveal their unique breed mix. Using an easy at-home saliva swab, you can collect a sample and receive detailed results in 2-6 weeks, uncovering insights into your dog's heritage. This test also highlights inherited behavioral traits and personality quirks, helping you understand your pet—whether a playful puppy or a wise senior—on a deeper level. More than just a DNA test, Ancestry connects you with a community of pet owners by matching your dog with others sharing similar genetics, fostering shared experiences and stories. Ideal as a thoughtful gift for pet parents or a must-have for new puppy owners, this kit equips you with knowledge to enhance your dog's care. With a straightforward process and expert analysis, Ancestry delivers valuable insights to strengthen your bond with your furry companion. Pros: Identifies 400+ breeds for precise heritage insights. Reveals behavioral and personality traits for all ages. Connects you with a community of similar dog owners. Easy-to-use at-home swab with prepaid return. Great gift for pet parents or new puppy owners. Cons: Results may take up to 6 weeks. Lacks health or genetic condition screening. To make your decision easier, here's a side-by-side comparison of Embark and its competitors: Test NamePriceBreeds CoveredHealth ConditionsTraitsRelative FinderAdditional FeaturesEmbark (Costco)~\$99350+270+55YesAllergy risk scores, genetic diversityWisdom Panel Essentials\$104.99365+3050+YesAncestry insightsDNA My Dog\$70-\$100350+LimitedFewNoBasic breed breakdownAncestry Dog DNA~\$99VariesLimitedFewNoBasic ancestry information This table highlights Embark's strengths, particularly in health screening and unique features, reinforcing its value at Costco's price point. DNA My Dog Premium Breed ID Test - 350+ Breeds, Genetic Age & Wolf Ancestry

Discover your dog's heritage with the DNA My Dog Premium Breed ID Test, utilizing cutting-edge CNV technology to analyze over 350 breeds, including wolf and coyote ancestry, with over 99% accuracy. This non-invasive cheek swab test is simple to administer for dogs of any age, requiring just 20 seconds to collect a sample, which you send back using the included prepaid envelope. Within 2-3 weeks, you'll receive an online report detailing your dog's breed mix, genetic age, and personality traits, offering a deeper understanding of their unique makeup. This test goes beyond breed identification, providing insights into breed-specific health concerns and tailored bonding tips to strengthen your relationship with your pet. Trusted by pet owners and rescue organizations since 2008, DNA My Dog combines fast results with exceptional customer support, ensuring a seamless experience. Whether you're curious about your dog's lineage or seeking to optimize their care, this comprehensive test delivers actionable knowledge to enhance their well-being. Pros: Over 99% accurate analysis of 350+ breeds. Includes wolf/coyote ancestry and genetic age. Fast results in 2-3 weeks with online access. Non-invasive swab, easy for all dogs. Offers health insights and bonding advice. Cons: Does not screen for specific genetic diseases. Health insights are breed-specific, not individualized. If you're on the fence about Costco's Dog DNA Test, rest assured that the Embark Dog DNA Test delivers exceptional value for its \$99 price. With comprehensive breed identification, extensive health screening, and fun extras like relative finder and allergy risk scores, it's a powerful tool for understanding and caring for your dog. Its accuracy, backed by science, and its edge over competitors like Wisdom Panel and DNA My Dog make it a standout choice. Whether you're curious about your dog's heritage, want to stay ahead of potential health issues, or simply love learning more about your furry friend, the Embark test is a worthwhile investment. Head to Costco, grab the kit, and unlock the secrets of your dog's DNA—you and your pup won't be disappointed! Disclaimer: Pricing and availability may vary. Always check Costco or Embark's official website for the latest details before purchasing. It is a genetic test that can determine your dog's breed and potential health issues based on DNA analysis. As of 2021, the cost of the test is around \$70. The test is generally accurate, but the results may not be 100% precise since dog breeds have a lot of variations. You can gain insight into your dog's breed history and potential health risks. The information can help you take better care of your dog and make informed decisions about their health. It depends on your personal preferences and goals. If you are curious about your dog's breed history and potential health risks, the test can be a useful tool. However, if you are not interested in this information, the test may not be worth the cost. Why does my dog eat grass and vomit? We love our dogs regardless of their breed, but that doesn't mean we aren't curious. With the advent of DNA testing for dogs, finding out your pup's lineage and breed make-up is now a reality. And that's just the start of everything you can learn about your pup through an at-home DNA test. The concept of DNA testing for dogs might seem foreign, but it's pretty simple and similar to human DNA testing. Research has advanced a long way with dog DNA as it has with humans. Many scientifically confirmed genetic markers for dogs can help determine breed identification for mixed breeds and possible genetic health risks. It can also uncover certain physical traits, like coat color, tail length, etc. The companies that sell and perform dog genetic testing maintain a database of breed-related genetic markers. After receiving your dog's DNA sample, they run it against these profiles. By analyzing breed-specific markers present in your dog's DNA, companies can give you an idea of the different breeds that make up your dog. They also look for particular genetic mutations known to contribute to certain health conditions. Read Our Dog DNA Test ReviewsSeveral dog DNA tests can tell you more than ever before, thanks to recent scientific advances. Here are some of the things you can learn from an at-home test and why you should consider getting one for your pup. Dog DNA test kits are a fun way to learn more about your furry friend — and they make a great gift for your dog-loving friends. As a mixed-breed dog parent, you likely weren't present at your dog's conception or birth, so you have no clue what breeds your dog's parents were. Running a canine DNA test for a mixed-breed dog helps to satisfy that curiosity. Most dog DNA test kits give you a report of your dog's breed percentage (e.g., 50% Cocker Spaniel, 25% Pug, and so on).Recent scientific advances can isolate certain genetic mutations found in a dog's DNA. These identified genetic markers tell scientists that your dog could be more prone to developing some canine diseases or is a carrier. This information doesn't mean your dog will develop the disease; it just means that he's at a higher risk. Knowing that your dog is predisposed to one or several genetic conditions can help you keep a watchful eye on early symptoms. Many companies also give you a detailed description of each breed in your dog's lineage, so you get a better understanding of each breed's general physical and personality traits. These tests typically trace your dog's family tree back three generations to your pup's great-grandparents. You may be able to find your furry friend's family members too. If your dog's relatives were tested by a particular company and are in their database, your pup's DNA test may be able to identify his relatives, possibly locating siblings or parents. Embark and Wisdom Panel are the only companies to offer this family tree matching.Not all DNA tests for dogs work the same way, which gives a lot of wiggle room for dog DNA test accuracy. As with most products, some at-home dog DNA kits are much better than others. Read our dog DNA testing reviews to learn more about specific tests we recommend.Despite the discrepancies, most kits follow the same process that includes a cheek swab (not a dog DNA blood test). Here are the typical steps you take for an at-home DNA test for dogs:Purchase an at-home dog DNA kit online. Once you receive your kit in the mail, be sure to read all instructions carefully. Most dog DNA test kits ask you to wait a while after your dog's last meal. Swab the inside of your dog's cheek using the swab(s) contained in the package. Pack the saliva-covered swabs in the small container provided in your kit. Use the postage-paid envelope to mail your sample back to the company's lab. You'll receive email or direct mail results from the lab with your dog's DNA results.The best dog DNA tests for home use will run you anywhere from \$79 to \$199. Breed identification tests are generally less expensive than health tests. There are a few slightly cheaper varieties of dog DNA tests on the market, but most have poor customer feedback and poor reliability. When it comes to dog DNA tests, you pretty much pay for what you get (the higher the price, the more accurate and detailed the results will be).It depends on the canine DNA testing company. Some companies have a larger margin of error due to a limited breed profile database. Even with a somewhat limited database, canine DNA testing can still be helpful because the results can narrow down your dog's breed category (if not the specific breed itself). While the DNA testing center may not have a specific breed on file, they will likely have a similar breed from the same class of dog.The majority of mixed-breed dogs in developed countries are of well-known breed ancestry. So it's unlikely that a mixed-breed dog from the United States is going to have the DNA profile of rare breeds like a Tibetan Mastiff or a Lagotto Romagnolo (an Italian retriever). The best DNA dog testing companies include all of the 180 American Kennel Club-recognized breeds.Learn more about how dog DNA tests work in this infographic:In Spring 2019, Mimi Concannon made a discovery with her dog. Two years prior, she fostered a puppy named Hadley (who she later adopted) from Last Chance Animal Rescue in Waldorf, MD. At the time, Concannon wasn't aware that Hadley had any siblings. It wasn't until she did an Embark Dog DNA test on Hadley in early 2019 that she discovered a close genetic match through Embark's DNA family tree.With the help of Embark's user community platform, Concannon was able to connect with the pet parents of Hadley's match. She had a sister, Ingrid, who also lived in the Metro DC area! Ingrid's pet parents had previously done an Embark DNA test, so they were able to make the connection.They arranged for the siblings (pictured) to reunite at a park in Maryland City, MD, and Hadley's mom describes their emotional meeting. "It was amazing to see Hadley and Ingrid together — they got along so well and look so alike, which is crazy to see because Hadley has such a unique look."As it turns out, Ingrid's parents also fostered another pup, Iris, who came from the same litter transported from a kill shelter in Mississippi. Concannon is hoping Iris' forever home comes across this story so the three Foxhound American Bulldog mixes can all be together again one day.If you're inspired by Hadley's story (also featured on WJLA's Let's Talk Live) and interested in the possibility of finding your dog's DNA match, keep reading to learn how it works and see the various at-home kit options. Or if you are ready to order a kit that includes family tree matching for your dog, place your order for Embark today.If you're looking for some basic information about your dog, like where he could have gotten that up-curved bushy tail, then dog DNA testing may be just the ticket. Also, if you want to know if your dog is more prone to developing certain hereditary health conditions, you have a few options now. Check out our best dog DNA test article for some specific at-home testing recommendations.Sally has over 20 years of experience in human health sciences communications, including 10 years as an expert on pet health conditions and treatment. She's also spent over a decade researching and personally using DNA tests as part of an expert team at Canine Journal. As dedicated canine professionals and long-time dog owners, we test and research the best pet products, not only for our own pups but for all of our readers.
