Package Includes 1x Spinner 3S 1600mAh Battery Posted by David on 3rd Jan 2024 This is the highest capacity variable voltage battery available today! Vape at your desired voltage! Higher voltage = More vapor! The Vision Spinner is compact making it the most portable variable voltage device available. Don't forget the high capacity battery cell... Vape for hours on a single charge!\*Here are some general features that were commonly associated with the Vision Spinner series, though specifics can vary depending on the exact model and manufacturer.Design & Structure: The VISION SPINNER 3, like its predecessors, is a cylindrical device. It has a battery compartment, a button to activate the device, and a 510-threaded connection at the top to attach a tank or cartridge.Variable Voltage: One of the primary features of the Vision Spinner series is its variable voltage adjustment. Users can adjust the voltage to achieve their desired level of vapor production, flavor intensity, and throat hit (usually ranging from around 3.3V to 4.8V). Higher voltages will produce more vapor but may also consume e-liquid faster and reduce coil lifespan, so keep that all in mind. The adjustment is usually done via a rotary dial at the base of the battery. More comfortable and ergonomic spin dial for adjusting the voltage.Battery Capacity: 1600mAh is a decent battery capacity for vape pens. It should provide users with a significant amount of usage time before needing a recharge. Longer Lasting Life span due to the New upgraded PCB circuitry And Battery Cell. The higher the mAh, the longer the battery should last before needing a recharge, assuming the same power draw.Button Activation: The SPINNER 3 typically has a button on its body. Pressing the button heats up the atomizer coil in the attached tank, which in turn vaporizes the e-liquid. Users then inhale the vapor.LED Indicator: Feature an LED light that indicates the battery's charge status and when the device is powered on. It even has an upgraded button with battery charge indicator: White light ~ 60%-100%, Blue light ~ 30%-60%, Orange light ~ 0-30%Safety Features: Like many vape batteries, the Vision Spinner usually comes with a range of safety features. This might include short-circuit protection, overcharge protection, and a Cutoff Time of Approximately 8 seconds.510/Ego Threading: The SPINNER 3 battery usually comes with both 510 and eGo threading, making it compatible with a wide range of atomizers and tanks..Charging: The device can be recharged using a specific USB charger designed for e-cigs. It's essential to use the recommended charger to ensure safety and prolong the battery's life.Usage: If you're considering purchasing one or using it, always read the manufacturer's instructions and safety guidelines.1.Attaching a Tank/Cartridge: Screw a compatible tank or cartridge onto the 510-threaded connection at the top of the VISION SPINNER battery.2.Turning ON/OFF: Typically, the VISION SPINNER battery can be turned on or off by pressing the activation button rapidly (usually 5 times) in succession.3.Vaping: Once the device is on and the tank/cartridge is attached, press and hold the activation button while inhaling to vape.4.Adjusting Voltage: Turn the dial or use the designated method to adjust the voltage according to your preference.Maintenance: To ensure the longevity and optimal performance of your VISION SPINNER 3-Regularly clean the threads and connections.-Charge the battery before it's entirely depleted.-Store in a cool and dry place when not in use.
