Additionally, readers taking the 1Z0-817 exam should review Appendix A before proceeding with this chapter. In previous studies, you may recall that the final modifier can be applied to variables, methods, and classes. Marking a variable final means its value cannot be changed after assignment. Similarly, marking a method or class final prevents overriding or extension, respectively. This section will review the rules for using the final modifier. If you've previously studied final classes, you may skip this section and proceed with enums. The provided example demonstrates local variables marked with the final modifier: private void printZooInfo(boolean isWeekend) { final int giraffe = 5; final long lemur; if(isWeekend) lemur = 5; else lemur = 10; System.out.println(giraffe+" "+lemur); } This illustrates that a final variable does not require an initial assignment, only that it must be assigned a value before use.
