Jung's Archetypes: Exploring Human Personality Through Symbols Carl Gustav Jung deviated from traditional psychoanalysis to explore ancestral roots, the collective unconscious, and various cultural symbols. He introduced the concept of 12 archetypes that represent distinct personality patterns. These archetypes are rooted in our unconscious mind and arise from a need to connect with others. Each archetype possesses unique traits that influence behavior and emotional responses. 1. The Selfless Individual 2. The Hero's Unwavering Ambition 3. The Rebel's Independent Spirit 4. The Lover's Sensual Nature 5. The Jester's Carefree Laughter 6. The Orphan's Emotional Wounds
