### HTML Codes Used in Web Design

#### List of Tags introduced in HTML5

Most of the tags introduced in HTML5 are designed to address content that was not present when HTML 4.01 was created. These new tags deal with content like media or the tags are a better ways to define page structure. Here are the tags introduced in HTML5.

- <!DOCTYPE HTML> - Defines document type – HTML is the only type in HTML5
- <article> <aside> - Defines an article
- <audio> <video> - Designates sound files
- <del> <ins> - Isolates a part of text that might be formatted in a different direction than text outside of it.
- <script> <noscript> - This is the container that holds any scripting language used to draw graphics on the Web.
- <command> <command> - Defines a command button users can click – inside a form
- <details> <details> - Used in a form. It designates a list of pre-defined options for input.
- <dialog> <dialog> - Defines additional information that a user can view or hide.
- <dialog> <dialog> - Defines a dialog box or window.
- <embed> <embed> - This is a container for an external (non-HTML) application – like a video.
- <figcaption> <caption> - The caption for <img> content.
- <figure> <img> - Specifies self-contained content like an image.
- <header> <header> - Defines the header portion of the document or a section inside the document.
- <keygen> <keygen> - Used to define a key-pair generator field in forms.
- <map> <map> - An area highlighted – or marked – for specific action.
- <meter> <meter> - A measurement within a known range (a gauge) – for example 2 out of 10.
- <nav> <nav> - Navigation links.
- <output> <output> - Specifies output of a calculation.
- <progress> <progress> - Represents progress of a task.
- <rp> <rp> - Defines what to show in browsers that do not support ruby annotations.
- <rt> <rt> - Provides an explanation/pronunciation of characters (for East Asian typography).
- <ruby> <rb><rt> - Defines a ruby annotation (for East Asian typography).
- <section> <section> - Defines a specific section inside a document.
- <source> <source> - Defines multiple media resources for media elements like <video> or <audio>.
- <summary> <summary> - Defines a visible heading for a <details> element.
- <time> <time> - Date and time.

Meta in latin means. La meta meaning. La balise meta definition. Definition de la balise meta.
