Steve Lander Thinkstock Images / Comstock / Getty Intes iTunes is more than a simple media management application. It is also a gateway for one of the largest media stores in the world - The iTunes Media Store. When you download a movie through iTunes, Apple sends the file to your computer. The iTunes program determines where it is saved based on your configuration. By default, iTunes creates an iTunes media folder within an iTunes folder in the Main Music folder. Unless you have changed the location where Windows saves files, either Windows 8 and 7 use the "C: Users Directory Username My Music iTunes Media. To find your exact path, go to this directory, replace "User name" with the name to use to access the computer. All downloads of all iTunes downloads are sent to the iTunes Media folder. On the Mac, iTunes works similarly. You also create a leading iTunes folder where you create a subfolder of the iTunes media for all downloads. Unlike Windows, use a different directory scheme. To find your files on a Mac, look in users / username / music / itunes / itunes media. Replace "Username" with your current username. If you don't like your current archiving path, you have two options. One is to collect the downloaded movie file and move it by only by cutting and gluing it into a new unit or directory. When you reopen the file in iTunes, the program will ask you to say where the new file is. The other option is to have iTunes move its entire Tunes directory to a different location. You can do it through the iTunes preferences tool. By default, iTunes stores your downloaded files to your computer's main hard drive. If you have a lot of iTunes downloads and other materials stored on your hard drive, you could exhaust the space quickly. By moving your iTunes files, if you do one at a time or in one hit, keep the space on your main hard drive. This also means that you will have room for downloading other films.
