Important information

Do not use Voriconazole if you are pregnant. It could harm the unborn baby.

There are many other medicines that can cause serious or life-threatening drug interactions with voriconazole. Tell your doctor about all the prescription and over-the-counter medications you use.

Before taking Voriconazole, tell your doctor if you have heart rhythm problems, an electrolyte imbalance, liver or kidney disease, or a history of allergy to other antifungal medications such as fluconazole (Diflucan), ketoconazole (Nizoral), or itraconazole (Sporanox).

Take this medicine for the full prescribed length of time. Your symptoms may improve before the infection is completely cleared. Skipping doses may also increase your risk of further infection that is resistant to antifungal medicine. This medicine will not treat a viral infection such as the common cold or flu.

Voriconazole can cause problems with your vision. If you use this medicine for more than 28 days, you may need to have your eyes checked.
