Indinavir Sulfate capsule

What is this medicine?

INDINAVIR is an antiretroviral drug. It is used with other medicines to treat HIV. This medicine is not a cure for HIV. It will not stop the spread of HIV to others.

What should I tell my health care provider before I take this medicine?

They need to know if you have any of these conditions:

- diabetes
- hemophilia
- kidney disease
- liver disease
- an unusual or allergic reaction to indinavir, other medicines, foods, dyes, or preservatives
- breast-feeding
- pregnancy or recent attempts to get pregnant

How should I use this medicine?

Take this medicine by mouth with a full glass of water. Take this medicine on an empty stomach, at least 1 hour before or 2 hours after food. You may take it with a light meal, like dry toast with jelly, juice, and coffee with skim milk and sugar; or corn flakes, skim milk, and sugar. Take your medicine at regular intervals. Do not take your medicine more often than directed. For your anti-HIV therapy to work as well as possible, take each dose exactly as prescribed. Do not skip doses or stop your medicine even if you feel better. Skipping doses may make the HIV virus resistant to this medicine and other medicines. Do not stop taking except on your doctor's advice.

Talk to your pediatrician regarding the use of this medicine in children. Special care may be needed.

Overdosage: If you think you have taken too much of this medicine contact a poison control center or emergency room at once.

NOTE: This medicine is only for you. Do not share this medicine with others.

What if I miss a dose?
