Customization

Slide for Reddit focuses on Material Design, specifically color implementation. You can assign a color to anything. You can make [/r/Android](#) posts green and [/u/ccrama](#) blue! Change your favorite subreddits to a meaningful color for easy spotting in [/r/all](#) and the frontpage. Change the default color away from orange if you'd like. It's all up to you!

Example : TextView set text shadow programmatically

Sample TextView...

SET TEXT SHADOW

TextView Text

CLICK HERE TO SET
TEXTVIEW HORIZONTALLY

Android textview set text alignment programmatically.

Notifications Save this page to your Developer Profile to get notifications on important updates. Stay organized with collections Save and categorize content based on your preferences. With Android 8.0 (API level 26) and higher, you can instruct a `TextView` to let the text size expand or contract automatically to fill its layout based on the `TextView`'s characteristics and boundaries. This setting makes it easier to optimize the text size on different screens with dynamic content. The Support Library 26.0 provides full support to the autosizing `TextView` feature on devices running Android versions prior to Android 8.0 (API level 26). The library provides support to Android 4.0 (API level 14) and higher. The `android.support.v4.widget` package contains the `TextViewCompat` class to access features in a backward-compatible fashion. Setting up `TextView` auto-size You can use either framework or support library to set up the autosizing of `TextView` programmatically or in XML. To set the XML attributes, you can also use the Properties window in Android Studio. There are three ways you can set up the autosizing of `TextView`: Default Granularity Preset Sizes Note: If you set autosizing in an XML file, it is not recommended to use the value "wrap_content" for the `layout_width` or `layout_height` attributes of a `TextView`. It may produce unexpected results. Default Default setting lets the autosizing of `TextView` scale uniformly on horizontal and vertical axes. To define the default setting programmatically, call the `setAutoSizeTextTypeWithDefaults(int autoSizeTextType)` method. Provide `AUTO_SIZE_TEXT_TYPE_NONE` to turn off the autosizing feature or `AUTO_SIZE_TEXT_TYPE_UNIFORM` to scale the horizontal and the vertical axes uniformly. Note: The default dimensions for uniform scaling are `minTextSize = 12sp`, `maxTextSize = 112sp`, and `granularity = 1px`. To define the default setting in XML, use the `android` namespace and set the `autoSizeTextType` attribute to `none` or `uniform`. Using support library To define the default setting programmatically through the support library, call the `TextViewCompat.setAutoSizeTextTypeWithDefaults(TextView textView, int autoSizeTextType)` method. Provide an instance of the `TextView` widget and one of the text types, such as `TextViewCompat.AUTO_SIZE_TEXT_TYPE_NONE` or `TextViewCompat.AUTO_SIZE_TEXT_TYPE_UNIFORM`. To define the default setting in XML through the support library, use the `app` namespace and set the `autoSizeTextType` attribute to `none` or `uniform`. Granularity You can define a range of minimum and maximum text sizes and a dimension that specifies the size of each step. The `TextView` scales uniformly in a range between the minimum and maximum size attributes. Each increment occurs as per the step size set in the granularity attribute. To define a range of text sizes and a dimension programmatically, call the `setAutoSizeTextTypeUniformWithConfiguration(int autoSizeMinTextSize, int autoSizeMaxTextSize, int autoSizeStepGranularity, int unit)` method. Provide the maximum value, the minimum value, the granularity value, and any `TypedValue` dimension unit. To define a range of text sizes and a dimension in XML, use the `android` namespace and set the following attributes: Using support library To define a range of text sizes and a dimension programmatically through the support library, call the `TextViewCompat.setAutoSizeTextTypeUniformWithConfiguration(int autoSizeMinTextSize, int autoSizeMaxTextSize, int autoSizeStepGranularity, int unit)` method. Provide the maximum value, the minimum value, the granularity value, and any `TypedValue` dimension unit. To define a range of text sizes and a dimension in XML through the support library, use the `app` namespace and set `autoSizeText`, `autoSizeMinTextSize`, `autoSizeMaxTextSize`, and `autoSizeStepGranularity` attributes in the layout XML file. Preset Sizes Preset sizes lets you specify all the values that the `TextView` picks when automatically auto-sizing text. To use preset sizes to set up the autosizing of `TextView` programmatically, call the `setAutoSizeTextTypeUniformWithPresetSizes(int[] presetSizes, int unit)` method. Provide an array of sizes and any `TypedValue` dimension unit for the size. To use preset sizes to set up the autosizing of `TextView` in XML, use the `android` namespace and set the following attributes: Set the `autoSizeText` attribute to either `none` or `uniform`. `none` is a default value and `uniform` lets `TextView` scale uniformly on horizontal and vertical axes. Set the `autoSizePresetSizes` attribute to an array of preset sizes. To access the array as a resource, define the array in the `res/values/arrays.xml` file. `10sp 12sp 20sp 40sp 100sp` Using support library To use preset sizes to set up the autosizing of `TextView` programmatically through the support library, call the `TextViewCompat.setAutoSizeTextTypeUniformWithPresetSizes(TextView textView, int[] presetSizes, int unit)` method. Provide an instance of the `TextView` class, an array of sizes, and any `TypedValue` dimension unit for the size. To use preset sizes to set up the autosizing of `TextView` in XML through the support library, use the `app` namespace and set `autoSizeText` and `autoSizePresetSizes` attributes in the layout XML file. `10sp 12sp 20sp 40sp 100sp` Additional resources For additional information on autosizing a `TextView` when working with dynamic content, watch `Autosizing TextView`. To align text in `TextView` at the center vertically and horizontally we need to make use of gravity attribute. Example 1 : You can use `center_vertical` | `center_horizontal` value to set the text at the center of the `TextView` area. Result : `TextView` Text displayed at the center.png More Posts related to Android, More Posts: 1.) Make sure the width is not set to `wrap_content` 2.) If the text view is inside another container, set gravity to the container. Remember that gravity is to align text and stuff like that while `layout_gravity` is used to align views within a parent. 3.) `TextAlign` aligns text at the beginning, end, left, or right of the container. Gravity is a bit more flexible with `Center_Vertical`, `Center_Horizontal`, or `Center`. AndroidApps/ApplicationsMobile Development This example demonstrates how to Justify Text in `TextView` on Android.Step 1 – Create a new project in Android Studio, go to File ⇒ New Project and fill all required details to create a new project.Step 2 – Add the following code to `res/layout/activity_main.xml`. = 8.0. The text in this `TextView` is justified. This feature is introduced in Android version >= 8.0. The text in this `TextView` is justified. This feature is introduced in Android version >= 8.0. Step 3 – Add the following code to `src/MainActivity.javapackage com.example.sample; import android.support.v7.app.AppCompatActivity; import android.os.Bundle; public class MainActivity extends AppCompatActivity { @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.activity_main); } }` Step 3 – Add the following code to `Manifest/AndroidManifest.xml`
